

Some Challenges Are Just *TWO* Big

Tandem Boschert-Gizelis Press Brakes

Boschert-Gizelis is looking for bigger challenges.

Some applications require a single piece that just won't fit on a standard press brake. A Boschert-Gizelis tandem installation of two 10-, 12-, 16- or 20-foot machines in combination with synchronizing software solves these bigger-than-usual problems. And with a simple switch, fabricators can break the tandem back into two independent press brakes—turning two machines into three capabilities. Boschert-Gizelis tailors tandem press brakes to respond to your biggest needs. It's time to get big.
